Office Action Summary		7,851	LIANG ET AL.	
	'''	cation No.	Applicant(s)	

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-5 and 8 are rejected under 35 U.S.C. 102(b) as being anticipated by Chisholm.

Chisholm shows metallic wire mesh pressed between two plates (9 in Fig. 5). This structure reads on the above claims; the lower plate 9 reads on the "heat conducting interface", the upper plate reads on the claimed "press plate", and the set of warps or woofs in the metal mesh structure (i.e. wires extending in parallel in one direction in the mesh) read on the claimed "plurality of heat conducting metal threads". Note in regard to claim 5 that, as pointed out above, only one set of the warp and woof wires in the mesh reads on the claimed wires, and these clearly are arranged in parallel with each other; the use of the term "comprising" in claim 1 permits the presence of elements in addition to those recited (i.e. the additional wires perpendicular to the first set).

Claims 6 and 7 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The remaining references show various metal wire structures mounted between two platen-like structures.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Allen J. Flanigan whose telephone number is (571) 272-4910. The examiner can normally be reached on M-F 9:00-5:30.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gene Mancene can be reached on (571) 272-4930. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
